

Merlinus Liberatus.

BEING AN

ALMANACK

For the Year of our Redemption,

1776,

Being the *Bissexile*, or *Leap Year*;

And from the Creation of the World, according
to the best History, 5723.

And the 87th of our Deliverance by *K. William*,

from Popery, and Arbitrary Government;

But the 81st from the

Horrid, Popish, High-Church, Jacobite Plot.

Wherein is contained all Things fitting and useful for such a Work, as
an Ephemeris of the daily Motions of the Planets, with their various
Configurations, Aspects, Conjunctions, Lunations, Eclipses, Astrono-
mical, Astrological, Meteorological Observations, the Rising and Setting
of the Sun, Moon, Planets, and fixed Stars, illustrated with Tables of
the Tides, Terms, and daily Equation of Clocks, Length and Break,
Increase and Decrease of Days, Semidiurnal and Seminocturnal Arches
for several Latitudes, a Chronology, Remarks on the Divisions of the
Heavens, with Judgments of the Eclipses, and also a particular Judg-
ment of a total Lunar Eclipse, with many other Things relating to
the Truth of Astrology, with an exemplary Nativity.

Calculated for the Meridian of *London*,

Whose { Longitude } is { 24 } Degrees { 20 } Minutes.
 { Latitude } { 51 } { 32 }

By JOHN PARTRIDGE.

— *Etiam Mortuus loquitur.* —

Printed for the Company of STATIONERS.

And Sold by GEORGE HAWKINS, at their Hall

LUDGATE-STREET.

[Price Stitched Nine Pence.]

H. Ephemerides.

290

A FURTHER CONTINUATION FROM MY LAST.

WE have it by experience, and are very sure by abundance of verification, that something of Astrology we do know, and our Saviour says that it is so certain: "When it is evening ye say it will be fair weather because the sky is red; and in the morning it will be foul weather, because the sky is red and lowring." *Matt. xvi. 2, 3.* "And when a cloud ariseth out of the West, straightway ye say a shower cometh, and it is so, and when ye see a south wind blow, ye say there will be heat, and it cometh to pass." And then he concludes, "Ye can discern the face of the sky, but can ye not discern the signs of the times?" *Luke xii. 54, 55, 56.* Now if hypocrites could be true Astrologers, what hinders but Christians may be as much and as good Astrologers as they? And if such as could not discern the signs of the times, yet could understand an Astrology by the Heavens, how much more famous in the heavenly skill may those men become who can discern both Christ and the Heavens too?

2. Such an Astrologer was Moses, that great man of God, who was learned in all the wisdom of the Egyptians. In Moses' days the Egyptians were as famous for literature as any nation in the world, and were great Astrologers. Josephus, the historian, in his *Antiq. lib. i. chap. 8.* tells us, that the Egyptians were well versed in Astrology, and that the first knowledge of that celestial skill they learned from the Patriarch Abraham whilst he was in Egypt. Now the Egyptians studied more arts than were good, such as were Sorcery and Inchantments, and a diabolical sort of Magic; but Moses was learned only in the lawful art, and such was Astrology when it was clean sifted from diabolical tares mingled with it by the enchanting Sorcerers. And now that Moses did particularly understand Astrology, is apparent by his predictions of the tribes as to what should betide them for the time to come; *Dent. xxxiii.* for it was not by revelation, nor dream, nor vision that he spake those things, for when it was so, the scripture was wont to say

how

Now it was so, and no such thing being alledged now, it follows that he spake merely of his natural knowledge, and the phrase favours of meer natural philosophy.

3. It appears also by the same Josephus, that Adam, Seth, Enos, and most of the Patriarchs were all great Astrologer, and after them Abraham, who taught both Chaldeans and Egyptians; and seems by his predictions to his sons Jacob was so too. And such was the opinion of the learned Origen. Of Joseph also very much may be said to the same purpose, he was a man famous for the interpreting of dreams, and this is a faculty commonly accompanying Astrology, and such as by rules of art may be aply known without divine inspirations. Of this Joseph the antient historian Diodorus Siculus hath said much, how he contributed not a little to the art of the plough, which was taught by Osiris and Isis; and how he taught them very many learned matters, both concerning religion and the state, and concerning things to come. He calls him Hermes Trismegistus indeed, but that Joseph was the same Hermes he spake of, is very plain to be understood, both by the time and age wherein Hermes lived, and also by his religion. of which Diodore saith, that he taught a religion by himself, and contrary to all the ways of worship as was ever known amongst the Egyptians before him, and he says that, "He was honoured, nay the most honoured, of the King above all men, for that he had found out, and counselled unto many things conducing to the benefit of man's life." Which is the very character of Joseph in Holy Writ, how he was in favour with Pharaoh there. Now of this man says Diodore, He was one of the first that was skilled in the stars, and the aphorisms of Hermes the Egyptian are extant unto this day, which although I do not believe were taught by Moses, who was the greatest Hermes of Egypt, yet being fathered upon him, it argues that he was a famous Astrologer esteemed of old, for that those antient things wanting a certain father were fathered upon him, as if he had been the fountain of that learning.

But of this more in my next.

A Table of the Moon's Age for every Day throughout this present Year 1776. Whereby, with the Help of the next general Tide-Table, the Time of High Water at all the Places above-mentioned in it, are shewn by Inspection.

An Explanation of this and the following Table.

First find the Month in the Head of the Table, and the Day in the first Column on the left Hand, and in the Angle of Meeting you have the Day of the Moon's Age, with which enter the following Table, and find your said Number in the left Hand Column, and over against it in the other Columns is the Time of High Water at all the Places above-mentioned, by Inspection.

Example. January the 2d, I find the Moon to be 11 Days old, and over-against 11 in the first Col. I find 11 Hours 48 Min. in the second Col. 10h 18' in the third, which is the Time of High Water at all those Places mentioned above in the 2d and 3d Columns. *Et sic de ceteris.*

A Table of Terms and Returns, for the Year of our Lord 1776.

Hilary Term begins Jan. 23, ends Feb. 12.

Returns or Etlongu Days.	Exc.	Ret.	App.	W. 11.
In eight Days of St. Hilary, Jan. 20	21	22	23	Tuesday
From the Day of St. Hilary in 15 Days, 27	28	29	30	Tuesday
On the Morrow of Purif. of bl. V. Mary, Feb. 5	4	5	6	Tuesday
In eight Days of the Purif. of bl. V. Mary, 5	10	11	12	Tuesday

Easter Term begins April 24, ends May 20.

From the Day of Easter in 15 Days, April 21	22	23	24	Wednesday
From the Day of Easter in 3 Weeks, 28	29	30	31	Monday
From the Day of Easter in 1 Month, May 5	6	7	8	Wednesday
From the Day of Easter in 5 Weeks, 12	13	14	15	Wednesday
On the Morrow of the Ascension, 17	18	19	20	Monday

Trinity Term begins June 7, ends June 26.

On the Morrow of the holy Trinity, June 3	4	5	7	Friday
In eight Days of the holy Trinity, 9	10	11	12	Wednesday
From the Day of the holy Trinity in 15 Days, 16	17	18	19	Wednesday
From the Day of the holy Trinity in 3 Weeks, 23	24	25	26	Wednesday

Michaelmas Term begins Nov. 6, ends Nov. 28.

On the Morrow of All Souls, Nov. 3	4	5	6	Wednesday
On the Morrow of St. Martin, 12	13	14	15	Friday
In eight Days of St. Martin, 18	19	20	21	Thursday
From the Day of St. Martin, in fifteen Days 25	26	27	28	Thursday

N. B. No Sittings in Westminster-Hall on Ascension-Day, Midsummer-Day, and the 2d of February.

The Exchequer opens eight Days before any Term begins, except Trinity, before which it opens but four Days.

Note, That the first and last Days of every Term are the first and last Days of Appearance.

THE ORACLE

An honest just Lawyer is the Delight of the Court, the Ornament of the Bar, the Glory of his Profession, the Patron of Innocency, the Upholder of Right, the Scourge of Oppression, the Terror of Deceit, and the Oracle of his Country.

January hath XXXI Days.

Come rouze, my Muse, tell what the Stars relate,
How, when, and where they will dispenſe their fate,
How England thrives, how her Affairs go on,
And what will by the Americans be done.
King George he muſt our Guardian Angel be,
While Jacob's God protects my King and thee.

February hath XXIX. Days.

Stilbon in Pices doth Seditions move,	1	21	12
Conjoining Mavors there, then squaring Jove.	6	21	12
Now are the Saints at work, now busy we,	11	21	D
And by base Projects their Designs pursue.	16	21	12
The Pitcher may go off, and off return,	21	21	12
But certainly at last comes broken home.	26	21	12

March hath XXXI Days.

All is not Gold that glitters, some devise
To cheat the easy, and abuse the wise,
With false Reports; under a specious Shew,
Of what seems just will all base Actions do.
These Rays will Frauds and secret Cheats detect,
See Mars is now in his own House direct

*Veritas odium parit,
Blandi loquentia amicos.*

April hath XXX Days.

See how the Spheres for ruffling Jarrs are set,
 By Nature's Laws, a Croud of Causes met.
 The when and what in mystic Motion lies,
 Thus mighty Bodies from small Seeds arise.
 Here's Wrath and Fury lodg'd (not understood)
 To wound the wicked, but to fright the good.

May hath XXXI Days.

M h 24
D 11

First retrospect these Rays that are before,
Next see Heaven's vigilant Ambassador,
From Mars with mighty Speed to Sol doth rove,
Then up to Chronas, back again to Jove.
Thus all God's Works do all his Laws embrace,
None do transgress but brutish Human Race.

June hath XXX Days.

Mars, Sol, and Saturn, are in Council met,
 Deliberately they each with other treat;
 The Subject seems of Weight they are upon,
 But the great Stars subscribe unto the Sun.
 The Sun in Gemini too! A glorious Sign,
 And who so bold bright Sol to undermine.

July hath XXXI Days.

Jove in the watry Trigon with the Sun,
 Stilbon and Venus in Conjunction;
 Here seems a Prospect for a Peace t'ensue,
 And they that ask for it desire it too.
 'Tis not from Man, 'tis God the Thing must do,
 If Heaven think it fit, then be so.

August hath XXXI Days.

Why should not fiery Mars in Cancer move?
 (In Square to Saturn there, and join'd to Jove,)
 To some rash Action, hard to be withstood,
 Some Rival Love, perhaps, may end in Blood.
 But more than this you may expect they'll do,
 Some public Action, and Destruction too.

September hath XXX Days.

Bold Mars thy Fury cease, forbear thy Rage,
 Let's treat a while, let us a Council call,
 Our All submit unto the Grave and Sage,
 That will preserve themselves, and us from Thrall;
 Use all your Care, stop the malicious Pen
 Of Libellers, the very worst of Men.

October hath XXXI Days.

My Muse would fain of Peace and Plenty sing,
 Altho' the World of Mischiefs Store do ring;
 The Planets in their Motions seem to faile,
 Oh might their Influx glad our British Isle;
 Heal our late Breaches, cleanse and heal each Sore,
 And England's Weal, and Beauty too restore.

November hath XXX Days.

When mutinous Humors let Mens Furies rage
 Into Revenge, alas! who can assuage
 The Flames of Anger? When Men do aspire
 Beyond their Bounds, Passion's the worst of Fire,
 And every Man doth know, when Force prevails,
 That Justice must not dare to use her Scales.

There is strange Whispering among the common People, of some notable Matters in Agitation, I hope we are grown wiser than to plot any more, let Time discover what so may not I.

December hath XXXI Days.

The two Benevolents shew their good Will,
And would Hatred allay, and Peace instil,
And by their homogeneal Temperament
They give a wholesome Air with Content.
May Heaven preserve our Land in Peace, defend
Both Prince and People, even unto the End.

1	*					☐	10 37	4 58	9 A 28	The many benevolent Aspects this Month among the Planets promise us some Harmony, among the rest we may expect to hear very pleasing Intelligence from Abroad, and a good Understanding of Things at Home, which will be well, if turbulent Spirits and malcontented Persons do secretly express their Malice, they shall not fail of a Reward suitable to their Crimes. I wish a happy Period to all Differences and unruly Passions of the most violent Spirits amongst us, who still endeavor to foment Faction and Controversies, but Qui ante non cavet, post dolebit, and let every true Subject say, Amen.

N. B. In the Kalendar Part you will find the Planets South-
ing inserted to several Days in each Month; and by this
Table you may easily find their Rising and Setting: First
find the Longitude for the Day proposed, with which enter
this Table, and take out the Semidiurnal Arch thereof,
which being added to the Time of Southing, gives the
Setting, but subtracted the Rising.

P A R T R I D G E, 1776.

Of the Eclipses that will happen in this Year, 1776.

SIX times to the inhabitants of this Earthly Globe, will the two Great Luminaries of Heaven be deprived from their sight; four times the Sun and twice the Moon, as they were calculated and sent to me, by my learned astronomical friend, Mr. Henry Andrews, Teacher of the Mathematics, at Royston, in Hertfordshire; with whom youth may be boarded, and made fit and ready for business.

These Eclipses will happen in the following order: The First is a small and invisible Eclipse of the Sun, on the 21st of January, at about half an hour past 2 o'clock in the morning, and falls in the first degree of Aquarius.

The Second is a great and total Eclipse of the Moon, which happens on the 4th of February, at 14 minutes past 2 o'clock in the afternoon. This Eclipse is quite over at 13 minutes past 4, therefore it is invisible to us in Great Britain; but in places that are situated easterly from us, the Moon will rise more or less eclipsed.

The Third is an Eclipse of the Sun, and happens on February the 19th, at about a quarter past 1 o'clock in the afternoon; it is invisible to us, and is only a small Eclipse where greatest; namely, near or under the South Pole.

The Fourth is also of the Sun, but invisible to our part of the Globe. It falls on the 15th of July, at near a quarter past 3 o'clock in the afternoon. The Moon here having got south latitude, as in the former, makes it a small defect towards the South Pole.

The Fifth is a long expected total eclipse of the Moon with continuance; it falls on Tuesday the 30th of July in the evening. This Eclipse will be seen (if clouds interpose not) by us in this kingdom, and not by us only, but by all the inhabitants of all the states, kingdoms and countries in Europe and Africa, the island of Madagascar, all the lesser isles of the Eastern or Indian Sea, the Atlantic Ocean, in Iceland, Greenland, Newfoundland, the island of Cape-Breton, the Caribbee Islands, Terra Firma, and quite through South America.

There has not been above six total Eclipses of the Moon that could be visible in England, from the beginning to the end, for the space of 39 years past, and out of these six,

I think

PARTRIDGE, 1776.

I think only three (if those) were visible, the rest could not be seen by reason of clouds; and should the sky be clear at the time of this famous Lunar Eclipse (as there is great reason to believe it will, the time and season of the year considered) we may readily say, there has not been such an Eclipse of the Moon seen in England, for less than 26 years before. At the time of this Eclipse, the Moon will be two hundred twenty-two thousand and three hundred and fifty five English miles distant from the earth's surface. The diameter of the earth's shadow (that causes the Eclipse) which the Moon passes through, is five-thousand, eight-hundred and eighty-nine English miles, and the Moon in going through this projected shadow of the earth, will move between thirty and forty miles in a minute of time; the time here in England may be expected nearly to correspond with the following calculations, which were made from Professor Mayer's last Lunar Tables, farther improved:

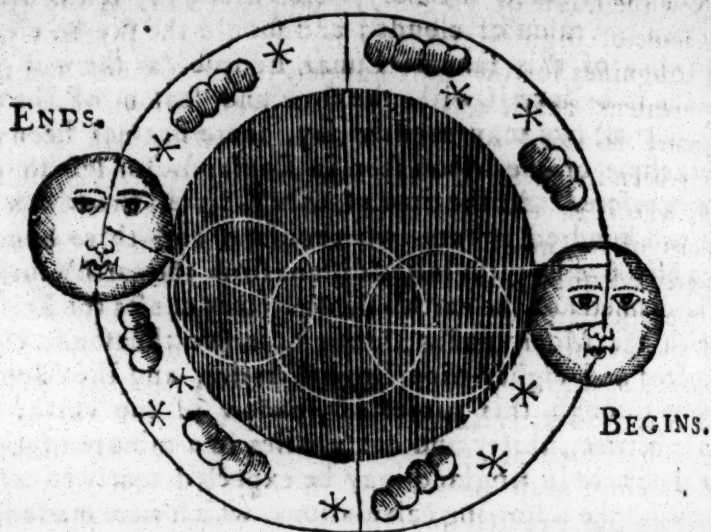

July 30 apparent time,	London.			Edinburg.		
	h.	'	"	h.	'	"
Beginning of the Eclipse,	10	8	17	9	55	4
Total darkness begins	11	7	57	10	55	14
Middle of the Eclipse,	11	55	11	11	41	58
Total darkness ends,	12	42	55	12	29	42
The Eclipse ends,	13	42	5	13	28	52
Viz. Wednesday,	1	42	5	1	28	52
Time in total darkness,	1	35	28			
Whole duration,	3	33	48			
Digits eclipsed,	19°	1'	30"			

Morn.

Note, at the middle of this Eclipse the Moon's lower limb is immersed within the earth's shade, no less than 19° 48' vulgarly, but erroneously called 19 Digits.

The Sixth and last is a Solar defect, and happens on the 4th of August, Ecliptic Conjunction with respect to London, is at 35' past 5 o'clock in the morning, a very small Eclipse near the North Pole. The type of the late Lunar Eclipse with my astrological judgment of it, and the rest of them follow;

Now

Now Five of these Eclipses I shall pass over without any notice, as being inconsiderable to us, because not visible, for this is a certain old rule: *In illis regionibus nil nocent ubi non videntur.* Viz. In those countries where Eclipses are invisible, are not hurtful. But, the total Lunar Eclipse whose type is above, I shall give you my astrological judgment of: The middle of the Eclipse is on the 30th of July, at 55 min. past 11 at night, when the Mid-Heaven is 7 deg. of ♊ , and the ascendant is 13 deg. of ♋ , the Moon is going from an opposition of Venus, and applying to a trine of ♂ . In all Eclipses of the luminaries, three things are to be considered: First, The quantity and time of duration. Secondly, The house and part of Heaven where it is celebrated: and Thirdly, That sign of the Zodiac which the Eclipse happens in; and after this method and order I shall give you a short judgment of this famous Lunar Eclipse:

The greater an Eclipse is, and the longer it dureth, the more eminent will the effects be, and the longer before they end; for in the Moon so many hours it lasteth, so many months doth its effects continue; and Cardan saith in his 2d Seg. and Aph. 18, that the Lunar Eclipses do then, and sometimes before, bring rain, and others much dryness; others winds; others earthquakes; others sterility, and others house burnings.

P A R T R I D G E, 1776.

Now the house of Heaven it happeneth in, is the 10th, the house of dignity and honour, &c. And Junctine tells us, it signifies sorrow shall happen to great men, and that it threatens death to those of a well grown age, &c. Mercury is Lord of the Horoscope, placed in φ , has lately been in $\square$ to ζ , and is applying to the ζ of the Sun, who is in the 4th in opposition to the 10th. Now actions of no mean concernment appear, and persons of the greatest quality will be active upon the stage of Europe; more particularly the French nation will be rampant, and still endeavour to enlarge their dominions: I mean the Monarch of France. And all I shall say, it is best policy of Princes to fortify themselves with the love of their people. I shall forbear to meddle with states, or state affairs, and therefore must be content to limit my pen; for envy may ruin the greatest man of art for speaking the truth; and unless we durst adventure, or had free toleration to speak the plain language of the Stars without flattery or connivance, we had better be silent. However for the satisfaction of the reader, I shall let him know what authors have written concerning Eclipses of the Moon in the Airy Triplicity: The Arabians affirm, that an Eclipse in that Trigon is the forerunner of famine, great sickness, pestilent diseases, and the like; and, considering the position of Heaven before-mentioned, it also threatens secret treasons, villainies, and conspiracies may suddenly break out during the effects hereof; many dissembling political stratagems amongst the great ones to keep up their prerogative, &c. But, *Quod supra me nihil adme*, and so I conclude my judgment of this Eclipse.

Judicium astrologicum, pro anno 1776.

Of the Four QUARTERS of the YEAR;

First of the WINTER QUARTER,

WHICH begins when the Sun comes to the first point of Capricorn, which happens, according to my calculations, on Thursday, the 21st of December, 1775, at 40 min past 10 at night, at which time 11 deg. of π are on the Mid-Heaven, and 16 deg. of π are ascending on the east. Now all the planets are under the earth.

P A R T R I D G E, 1776.

earth, except Jupiter, who is posited in the 10th, in opposition to the Moon, and Mercury in the 4th; the Moon is going from the sextile of Saturn, and applying to the δ of the Sun in the 4th, γ is in the 2d, η in the 3d, and δ in the 5th. It is very observable, that all the angles and also the Moon in the Brumal scheme are in common signs, which denote variety of action to happen in this quarter of the year, and that many matters begun therein, as well of general as particular, of public as private concernment will either prove abortive, or meet a too hasty or imperfect period. Sundry weighty things will be attempted, or undertaken upon slender impotent grounds, not of strength or sufficiency to support or bear them.

The vulgar people or commonalty, are signified by γ and the Moon, who are both in common signs, disposed of by Jupiter, who oppose them from the Mid-Heaven, which positions are of great caution, and advise the vulgar not to be like busy flies, and play with the flame too much, lest they thereby burn their wings; for I say these are odd positions, and seem plainly to tell the anomalous part of the world, that deceitful and double dealing with others towards their superiors, protectors and preservers will occasion great detriment and loss to many of them. If they would be happy and shun dangers, let them chearfully obey and submit to the edicts of authority. But we are more particularly to remember that this Brumal scheme presents us with a square of the two infortunes. Now we may expect to hear of many complaints, and it is very probable some persons of eminent note may be accused or impeached among us. God preserve us from all violent distempers (which may fall I fear too severely upon us at the end) many considerable matters are now upon the stage, we are at difference with his Majesties North American subjects, if I may venture to call them such; but at peace with all the European nations, and I pray God to continue it. Now these North Americans are blame worthy in great measure, they are now very rich, stubborn, if a rebellious subject, they have at all times been aided and assisted by our acts of parliament; had men, and infinite sums of money from government, when ever they required it; and now to be disobedient to their own protection, viz. the laws of the Legislature, and after all their fawning applicati

P A R T R I D G E, 1776.

applications to the King, because their grievances are not redressed to their own minds, they fly in the face of government, and say, "They will not rely on the faith of Kings, nor on the omnipotence of the British Senate." But the time will come when they will repent of their rash and inconsiderate folly; and as Jupiter is in Π London's ascendent posited in the Medæcli intimates the willing endeavours of many noble-minded and truly loyal persons of great knowledge in the affairs of the world; such persons as those will endeavour to qualify or meliorate all those debates now in agitation, both at home and abroad. Great endeavours are also used for regulating of divers disorders that have lately happened, and quieting the minds of a discontented people, who are too prone to complain of the burthens they lie under. Old grudges are now brought to light, and questioned. Here appears a change of good will or former correspondency among friends, and of other persons formerly living in friendship and unity; and instead of love, arises a weariness of each others company, and consequently much ill will also. This last seems to influence the two contending parties in this kingdom, the truly orthodox of the Church of England, and the chattering whimsical enthusiastic.

The diseases afflicting the body this quarter, are melancholy, and phlegm, producing much heaviness, cold and dullness; and therefore it concerns all careful persons that prize their health, to antidote themselves against such assaults, by eating such meats as are of an hot quality, and keeping their bodies warm. For my observations on this quarter, I take this short peice of poetry:

See how the Summer posts and hastes away,
The nights grow long, and shorter far the day;
The woods look tatter'd, the leaves also be
Divested of their former livery.
The winged musicians of the air don't sing
The notes with which they usher'd in the Spring:
They've lost their sweeter tunes, their voices be
Grown harsh and flat, and void of harmony.
The fields that were with scarlet flowers o'erspread,
Look russet now all Flora's pomp is dead.
Now hills, rocks, mountains, cover'd are with snow,
Which soon with floods the vallies overflow. Of

PARTRIDGE, 1776.

Of the SPRING Quarter,

WHICH takes its beginning according to my tables, on Tuesday the 19th of March, at 30 min. past midnight; the Sun at that time entering the first point of Aries, when 9 deg. of Sagitary ascends on the east, and 8 deg. of Libra culminates. Saturn is posited in 19 deg. of ♄, & in the 10th, Jupiter in the 7th, in 15 deg. of ♃, applying to the 3d and last, Δ of Saturn, and Venus in 19 deg. of ♀ in the 2d, and the Sun, Moon and Mars are posited in Aries, in the 4th applying to the opposition of ♄ in the 10th, and Mercury in the 3d, in square and reception of Jupiter; and thus are the planets posited at this violent ingress. Now from hence I fear that many unquiet turbulent spirits will appear, and shew themselves in this revolution. Do you see the planet Mars in the 4th angle? and in Aries too a fiery cholerick angry sign? Mars in the 4th as posited in this figure, prenotes quarrels, contentions, public disturbances, and finally the period of all our undertakings. Mars in signo mobili multas lites efficit, Mars, in a moveable sign, brings many contentions; and I remember Almanzar commands us to turn away our eyes from that scheme which shews Mars to be in an angle. *Averte oculos tuos, saith he, a figurâ in quâ Mars fuerit in angulo.*

Now Mars is not alone in an angle, he is in great company there; the Sun (the Prince of Planets) is in conjunction with him; these are both powerful too; one in his domal dignity, the other in his exaltation, striving which shall most prevail in their fiery influences. *Dufam et durum non faciunt mutum.* Here are wanting the gentle beams of Jupiter or Venus, to alleviate the fervent and intemperate heat of this conjunction. It is a great and notable congress, and the 12th in order of the 120th conjunction, mentioned by Ptolemy, and it is the greatest, because it happens in an equinoctial sign, and at the vernal ingress. I shall want room to cite authors at large for the full explication hereof: Let the Mundane Salamanders who delight to live in flames, inherit the angry, furious, and fiery effects of this conjunction; and let sober men who delight to follow peace with their neighbours, and

P A R T R I D G E, 1776.

to practice obedience to their superiors, still pursue such christian methods, and that will put them into a compleat possession of the blessings of fortune here, and of Heaven hereafter. None can enjoy God's peace without paying duty to his Vicegerent.

There is one thing to be observed in this quarter, and that is, that Mars keeps company with the Sun from the beginning of February, to the end of May, from whence I judge we shall have, during that time, an insalubrious air, that may cause diseases of the nature of δ , such as violent pains in the head, rheums in the eyes, with violent pains and gripings in the bowels, which brings me to the Summer Quarter.

Of the SUMMER QUARTER.

AT the Summer ingress, which begins on the 20th of June, at 44 min. past 10 at night, we find 12 deg. of $\uparrow$ on the Med. Cœli, and 18 deg. of ∞ ascending, $\hbar$ is on the cusp of the 8th, in 15 deg. of $\triangle$; the Moon in the 7th in 26 deg. of Ω , going from $*$ of φ , and applying to $*$ of $\odot$ and Υ ; $\odot$ and Υ , are conjoined in the beginning of ϖ δ and φ are in conjunction in Π , London's ascendent, there are no destructive rays at the ingress, nor at the New Moon preceding; $\hbar$ has lately been in Δ with Υ , now he is in Δ to δ and φ . Now you see the superiors are all in a pacific position, therefore I see no reason to judge any actions of violence and hostility; but on the contrary, an inclination and tendency to peace and quietness, and to adhere more strictly to the established Church of England, which God grant; for true piety or devotion to religion is never contentious, obstinate, envious, rebellious, or disturbant to magistratés, the public peace or their neighbours; but on the contrary, exercises itself in acts of love, charity, friendship, brotherly kindness and the like, for it is not zeal to God or religion, but wilful obstinacy, that makes men to oppose authority, or disturb the public settlement.

Of the AUTUMNAL QUARTER.

WHICH begins September the 22d, at 14 min. past noon, when 6 deg. of $\uparrow$ ascends on the last, and 4 deg.

P A R T R I D G E, 1776.

4 deg. of $\triangle$ culminates; in the scheme of this ingress we may observe three remarkable positions; one is the δ of η and ξ in the Mid-Heaven, and the second is the $\square$ of η and γ separating in $\triangle$ and $\boxminus$, and the next is the $\square$ of ξ and γ applying from the same signs; the δ of η and ξ is near to the opposite place of the last great δ of the two superiors in the year 1762, and γ is in $\square$ to them both, and to the great conjunction also. Now the superiors as they have had three $\triangle$ s from $\triangle$ and Π , so they will have three $\square$ s from $\triangle$ and $\boxminus$ before they part, the first of them in September, 1776, the second in October, and third in June, 1777. What these $\square$ s may relate to and signify, I will more largely discourse the next year, (God willing) and for the present, say only this, that they will have effects suitable to the conjunction, and also probable to accomplish its effects; for in my opinion, there is another scene of affairs, different from what has been yet public to the world, since the last conjunction; and though I think it will be different from the power of nations, yet I think it will be of or concerning government too; and I am sure it will make a preparative for something yet not foreseen, which I will not venture to name. The three gentlemen η γ and ξ must have their equal shares in the twenty years effects, η and ξ have had their shares in full; but γ hath not yet had his, which I expect he will have in the next five years; and that it will begin to appear in the year 1777, and towards the latter part of it too, and I conclude my annual work with these few lines:

And now, good reader, time it is we part,
Farewell, 'till next year; then with all my heart
I shall continue this, and so present
More useful matter which may give content.
Friendly scan all, yet scandalize me not
With the detracting tongue of ev'ry sot;
If well, then censure well; if ill, dispraise it;
Yet would I know if he be wise who says it.

F I N I S.
